

Senior ERP Analyst/ Database Administrator

DATE POSTED: May 4th, 2012

LOCATION: WINNIPEG

As a member of the Information Technology, Business Services team, you will be responsible for maintaining existing databases and applications and integrating 3rd party systems and developing new systems and reports. The role demands a logical, process-oriented person with a wide skill set and an appetite for translating complex business requirements into efficient technical solutions.

Primary responsibilities include:

- Provide technical expertise and recommendations regarding software projects and initiatives.
- Develop documentation to describe custom configuration of applications and operating procedures.
- Deliver solutions using Crystal Reports, SQL Reporting Services and other business intelligence tools.
- Review, troubleshoot and/or analyze code, scripts, SQL statements in order to suggest corrections and improvements to improve system usage and performance.
- Responsible for functions associated with the design, implementation and maintenance of SQL server databases.
- Maintain and improve database operational efficiency.
- Performs daily, weekly and monthly data maintenance tasks.
- Manages software changes.
- Test, document and maintain partner-developed software and configuration changes.
- Design and develop future feeds to the Data Warehouse and Data Marts.
- Works cooperatively with other IT employees to accomplish department and corporate goals.
